

# You Might Bring COVID-19 Back Home

Classes are slowly starting up again. With the resumption of classes, there are more opportunities for friends to get together. The following cases of infection have been increasing.

After class, I went out to eat with my friends and I got infected.

I went out for a drive with my friends and I got infected.

I had a party at my friend's place and I got infected.

Infected person has close contact with family members and all family members are infected.

## To avoid this:

When you eat out with your friends, go to a restaurant that has thorough infection control measures.

Wear a mask unless you are eating or drinking.

Have an online drinking party and enjoy talking with your friends.

※Be Sure to Cover Your Nose※

Masks are effective as infection control measures, but if you don't cover your nose as well as your mouth, the risk of infection will increase. Make sure you cover both your nose and mouth.
